**Integrated Biomolecule Corporation Acquires Assets of
Analytical Division of Large Scale Biology Corporation**

Tucson, Arizona, June 11, 2007 - Integrated Biomolecule Corporation (IBC) announces the acquisition of substantially all of the assets of PDI Analytical Laboratories, the analytical division of Large Scale Biology Corporation. Included in the purchase are two tandem mass spectrometers (LCQ and Micro Q-TOF), a MALDI-TOF and a GC/MS system used for biomarker discovery and advanced analytical characterization of both small and large molecules. This instrumentation will augment the IBC Labs division, which has been conducting research and analytical testing of pharmaceuticals, nutritional supplements and other products for over 15 years.

In addition, Earl L. White, Ph.D., previously the Managing Director of PDI Analytical and Vice President of Analytical Sciences for Large Scale Biology, has joined IBC as Vice President of Analytical and Pharmaceutical Sciences. Dr. White has authored 23 peer-reviewed papers and 37 abstracts and presentations, and has received numerous awards and recognition from such esteemed scientific organizations as the National Science Foundation and the American Chemical Society. Dr. White brings his unique experience having held senior analytical positions in both pharmaceutical development and contract analytical testing.

“This acquisition is a continuance of our growth and expansion of our services. It enhances our tradition of partnering with biotech, pharmaceutical and diagnostic companies to develop and apply the latest advances using the most sophisticated techniques,” said Robert S. Green, IBC’s President.
